Spotlight on Consultancy

Erin Griffiths – Data Analyst / Consultant

Erin joined Newtyne in 2022 after graduating with a degree in mathematics and statistics. Since joining, she has worked on a remediation project but more recently has entered the world of pensions.

She possesses broad technical expertise across tools such as SQL, Teradata, Snowflake, Python, SAS and Excel.

She is currently working as a data analyst at Royal London on two projects: a business intelligence product and a client-facing service.

Most Challenging Project?

Company: NatWest

Role: Data Analyst

Date:
Sep 2022 - Oct 2025

Technology:
Teradata, SQL, Snowflake, Tableau, Erwin, GIT

Project Overview

Erin worked as a data analyst on a large-scale regulatory remediation project that focussed on a past business review of investment advice provided by various sales channels.

She contributed to key analytical workstreams focussed on population testing, data validation and remediation operations analytics.

Her tasks were supporting the development and execution of testing for cohorts within the scope of remediation and providing analytical outputs that supported remediation operations and decision-making, ensuring continuous governance traceability throughout

Why?

This project was the challenging due to the complexity of working with data from multiple sources. It also involved ongoing interpretation of requirements and risk, so aligning logic across operations and data teams required clear documentation and regular clarification.

Millions of records meant efficient SQL and attention to detail were essential to meet tight deadlines in a high-pressure environment where traceability and evidencing are critical.
